

Sterile Manufacturing Guideline

Sterile products must be manufactured under controlled conditions to minimize microbial, particulate, and pyrogen contamination. Environmental monitoring shall be performed in all grade A and B zones.

The acceptable daily exposure limit is 100 micrograms per day. Cleaning validation requires documented acceptance criteria for residues.

Acceptance Criteria (Table)

Parameter	Grade A	Grade B	Limit
Particles $\geq 0.5\mu\text{m}$	3520	3520	per m3
Particles $\geq 5\mu\text{m}$	20	29	per m3
Microbial (air)	<1	10	CFU/m3
